

**Douglas County PUD Purchases Acoustic Scintillation Flow Meter (ASFM) System from ASL AQFlow.**

ASL AQFlow of Sidney, BC Canada has received an order from Douglas County PUD of East Wenatchee, Washington, USA for a 3-bay, 10-path ASFM system for use at the Wells Dam on the Columbia River in Washington state.

Douglas County PUD made the decision to purchase the ASFM system following successful comparative testing of the system against time of flight and Winter-Kennedy instruments at the dam last year.

The ASFM system is particularly applicable to short intakes and can be readily moved from unit to unit for accurate measurement of flows, features which Douglas County will use to full advantage at their 10 turbine Wells Dam.
